

Linux Development note

1. UBUNTU 8.10: this version with the X-Window issue, the graphic mode only can operate with X586 system.

Only the alternative version could be installed now. If you need to use the window mode, it could not satisfy you.

2. UBUNTU 8.04/9.04: please install this OS on other platform (Intel/AMD) first, then follow second half of the guide "install_debian4.pdf",

To unpack the kernel package (2.6.29.1) when complete it, just move the storage with UBUNTU 8.04 back on VDX platform,

And operate with the new kernel "2.6.29.1" in the grub boot list.

3. DEBIAN 5.0: please do the same steps as UBUNTU 8.04, to install this OS and unpack the kernel package (2.6.29.1) on the other platform,

When complete, just move back to VDX platform to use.

Please mail to info@roboard.com for the preinstall image file of Debian 5.0

Please add the parameters as ***ghost32.exe -ir -ib -ial*** to restore this image.

4. DEBIAN 4.0: please check the guide of "install_debian4.pdf" at first, and follow the guide to install it,

After install complete, the next step was leading you to unpack the new kernel package, and use this new kernel to boot.
